Course title: Research methods in development studies (2440604)

This course introduces students to a variety of research methods and techniques currently used in social research. It also aims to expose students to as many methods and techniques as possible and to encourage them to apply such methods in development studies-related research. Discussions in the class cover both quantitative and qualitative methods, such as statistical techniques, analysis of quantitative data, exploratory research, social surveys, interviewing, participant-observation, focus group discussion, tracing family's and community's histories, fieldwork, planning and action-related research, and documentary research. All this, in other words, can be roughly categorized into two sets: those relating to the conventional social research and those to development-related issues. Guest lecturers are experienced researchers who will provide background, insights and tips on research methods, data analysis, research application and research conducting-related difficulties.

It should be emphasized that all research methods and techniques demonstrated in this course are "tools" generally used in conducting social research. In addition, there will be research exercise, field practices or field site visits, whose purposes are for students to practice research survey, interviews and participant-observation among the ordinary local people in order to learn more about community's life and development-related problems that may occur in such communities. Students are strongly encouraged to examine any research methods in everyday life's reality and to select the ones suitable for her or his research, or even thesis.

Course objectives:

- To provide students with a basic understanding of socio-cultural research methods related to development studies.
- To demonstrate the application of such research methods to development studies.
- To offer students an opportunity through field practices and community study to examine the application of such research methods in everyday life's reality and to reexamine the community's problems related with developments.
- To assist students to choose and apply or design a methods suitable for their research projects or theses.

Course assessment

Course assessment is totally based on assignments, as follows:

1. Class participation and assignments in class (Dr Niti Pawakapan), 40%;
 2. Assignment on a particular topic (Dr Niti Pawakapan), 20%;
 3. Ajarn Siriwan Siriboon's assignment, 40%;
- There are no examinations.

Lecturer: Dr Mike Heyes

Recommended reading: To be confirmed by the lecturer

Week 9, 30 November 2011

Session discussion: Discussing thesis topics

This is an exercise for students who want to discuss about his/her research for the thesis.

Lecturer: Dr Niti Pawakapan

Week 10, 7 December 2011

Session discussions: Quantitative research

Lecturer: Ajarn Siriwan Siriboon

Recommended reading: To be confirmed by the lecturer

Assignment (40%)

Week 11, 14 December 2011

Session discussions: Quantitative research

Lecturer: Ajarn Siriwan Siriboon

Recommended reading: To be confirmed by the lecturer

Week 12, 21 December 2011

Session discussions: Quantitative research, SPSS (if possible)

Lecturer: Ajarn Siriwan Siriboon

Recommended reading: To be confirmed by the lecturer

Week 13, 4 January 2012

Topics: Conducting research: what have we learnt?

Lecturer: Dr Niti Pawakapan
